

TREE SEEDLING SALE

The Annual Tree Seedling Sale of the Franklin County Conservation District is now in progress. This excellent stock comes from a state certified nursery. Seedlings must be purchased in bundles of 25 per species. This insures you of receiving top quality seedlings since packets will not have to be opened upon arrival from the nursery.

We expect the seedlings to be available for pickup around the middle of April. Those ordering tree seedlings will be notified by mail of the date and a map of the pickup area.

Orders may be placed by stopping in at the Franklin County Conservation District office at 185 Franklin Farm Lane, Chambersburg, PA 17202, or by mailing the order form below, along with your check payable to the F.C.C.D., no later than March 5, 2010. Please add 6% sales tax on all orders for non-farm use. This order form is also on our website at <http://www.franklinccd.org>. You will need legal size paper (8 1/2" x 14") to print this form.

ALL ORDERS MUST BE PREPAID. SORRY, NO REUNDS

DOUGLAS FIR—This extremely hardy tree has short, soft blue-green needles. Grows fastest in moist, well drained, light soil, in full sun. Will not do well in heavy, wet, clay soil. It is the largest lumber-producing tree in America. It is also the most popular Christmas tree because of its color, symmetrical form and ability to hold its needles for a long time.

CONCOLOR FIR—Soft needles vary from silvery-blue to silvery-green. Grows best in well-drained soil and full sun. Will not do well in heavy, clay soil. This narrow, pyramidal fir is one of the best for northern gardens, noted for withstanding heat and drought better than most firs. A good timber tree as well as an excellent choice for a Christmas tree.

FRAZER FIR—Often called Southern Balsam Fir. Grows to 60 feet. Very soft, shiny, dark green foliage is silver on the underside. Likes cool, moist, well drained soil. Will not do well in heavy, wet, clay soil. Does not require full sun. **THE BEST CHRISTMAS TREE** with good needle retention.

COLORADO BLUE SPRUCE—Its stiff silvery-blue to bluish-green needles are 1" long. A handsome ornamental specimen in a single planting or as a dense, colorful screen or windbreak. Likes ordinary soil, average moisture, and full sun. Does not like wet soil.

NORWAY SPRUCE - Fastest growing of the spruces. Develops strong graceful branches that are covered with dark green needles. Makes an ideal windbreaker. This tree grows at a medium to fast growth rate and does well in full sun. The Norway spruce also makes a wonderful wildlife habitat.

EASTERN WHITE PINE—Fast growing to 100 feet. A five needled pine, with soft, light green-blue needles, 4 inches long. Can tolerate dry, rocky soil. Grows in normal moisture conditions but can tolerate wet, swampy areas. Excellent ornamental tree for specimens, naturalizing, windbreak or dense screen. Also widely used for Christmas trees and timber.

AUSTRIAN PINE—Grows to 50-60 feet. Stiff, dark green needles 3 1/2–6 1/2 inches long. Dense, pyramidal growth. Ordinary to poor soil. Does equally well in limestone or acid soil. Can take dry, rocky, windy conditions. Excellent tree for naturalizing.

PIN OAK - Native to eastern North America, the Pin Oak is a medium sized deciduous tree growing 60-70 feet tall. It is naturally a wetland tree and develops a shallow, fibrous root system. It is confined to acidic soils and does not tolerate limestone. Pin Oak is one of the most popular ornamental trees in the United States.

WHITE OAK—A native tree growing to 90 feet. Dense foliage is bluish-green, to reddish brown in fall. Grows best in a deep, loamy, well drained soil. Known for their broad, round head and massive, wide spreading branches. White Oak are easily transplanted when young and they have a high resistance to ice breakage and oak wilt. Also, a good tolerance to highway salt.

RED MAPLE—Also known as Scarlet or Swamp Maple. Native to eastern U.S. Growth to 120 feet. Highly prized because of its bright red flowers in early spring before leaves appear. Bright green leaves turn brilliant red or orange in fall. Can tolerate wet, swampy soil conditions. Widely used for wetland plantings.

WHITE FLOWERING DOGWOOD—Dense lustrous, green foliage, turning bright scarlet in the fall. Clusters of white flowers up to 5" in diameter bloom in late May, giving way to bright red berries in the fall. Does best in rich, moist soil, but is known to grow well in average well drained soil.

TULIP POPLAR - The Tulip Poplar is easily recognized by its general shape, with the higher branches sweeping together in one direction. They prefer a temperate climate, sun or part shade and deep, fertile, well drained and slightly acidic soil. In autumn, the leaves turn yellow, or yellow and brown. Wood from the Tulip Poplar is easy to work and commonly used for cabinet and furniture framing.
